Data Center AV Solutions

Secure, Scalable, Real Time, Enhanced Visualization, Seamless

Is your Network Operations Center providing the real-time visual information you need to keep your Data Center operating at the speed of light?

Is your operational information slowing down your decisions?

- ► Excel & text files
- ► Silos from independent sources
- ► Time delays in data acquisition
- ► Missing data analytics
- ► Open network data sourcing
- ► Limited to preset formats

Secure: Information Assurance and data security are paramount in today's Operation & Control Centers for mission critical Data Centers and DOD Special Operations Commands. Our network architects ensure management networks are isolated and secure to minimize the exposure to external attacks.

Scalable: Your operation center needs to scale with your data center footprint locally, across the country, and around the globe. This includes remote monitoring, redundancy, and provide back up for continuity of operation for disaster recovery support.

Real Time: Live and accurate information must be presented to maintain an accurate dashboard of the current operating status. Internal metrics combined with external updates can quickly show correlations between outages, surges, weather, accidents, and other events.

Enhanced Visualization: Information can be aggregated to create a digital war room for distributed knowledge sharing, collaboration, and decision making. Live concurrent streams can be viewed, locally and with other Ops Centers, to maximize the available resources for analysis and decisions.

Seamless Integration: Agile analytics can link data sources and provide a unified common operating picture to makes a visual impact. This will also scale to support information sharing between Ops Centers and remote users on smart devices, seamlessly and secure.

Data Center AV Solutions

Improve Your Customer and Teammate Experience

Digital Signage: Where are you going and what do you need to know before entering the man trap doors? Timely information keeps your clients and team up to date on the latest news as they navigate the data center. Late-breaking news and weather, COVID-19 reminders, schedule of events, and wayfinding will get your message out to everyone while they are in the building.

Paging, Background Music & Sound Masking: Tired of noise and hearing other people in the background? Improve the quality of your employee and visitor experience with the strategic placement of sound masking and background music systems. Paging systems may be required in large operational areas for safety notifications and coordination of personnel activities.

Executive Briefing Center (EBC): Your first impression with a prospective client who is meeting you at the data center can make or break the deal. Our EBC and Board Room experience can deliver a solid easy-to-operate system that supports BYOD wireless presentation and collaboration that works seamlessly with any of the major collaboration platforms (Teams, Zoom, WebEx, etc.) Touchless control features are incorporated into your room and high-performance audio systems pick up speakers anywhere in the room to support local social distancing requirements.

Huddle Rooms: What does your background look like when you are at your desk on a video call? Additional huddle rooms will be needed to support the increased demand for collaboration and video call while you are in the office. Huddle rooms provide a higher quality audio and video experience, eliminating the personal workspace background clutter that is often seen on Zoom, Teams, and other calls during the pandemic.

Room Occupancy, Availability & Scheduling: Nothing is more stressful than an unexpected client meeting and you need to find an open conference room for six people at 1 p.m. to close the deal. Room scheduling and availability signage can make this as simple as an Outlook calendar invite to get the resources booked. For ad-hoc, last-minute internal meetings, room availability flags give a quick, at-a-glance, visual indication for which rooms are in use or available, to minimize the delays in finding open resources.

Touchless Presentation & Automated System Wake Up: Never look for the "on button" again. Using occupancy sensors, we can wake up the display and show the wireless presentation on the screen login message for connecting your BYOD. Starting a wireless presentation has never been easier or contactless as we can offer today.

The Data Center Experience

Data center AV solutions built for the customer experience.

Integrated Technology Delivery

Enhance your project's ROI while delivering it faster!

Managed Services Center

Choose from our flexible suite of 24/7 support, maintenance & monitoring services.
