

Visitor Management Systems: The New Normal

Visitor authentication & management systems are evolving as organizations adjust to the new normal and new requirements. Clipboard sign-ins are a thing of the past now that you can log visitors in via a cloud-based or on premise platform. Hosts can send invitations for scheduled meetings in advance and sign in a walk-in visitor. Host permissions as well as room and calendar reservations can be integrated with Active Directory and pre-existing reservation systems. Guest identities can be validated and authenticated with a 1-to-1 QR code or an authentication key sent to their mobile devices. For additional security, you can capture live photos every visit and leverage drivers license scanning to mitigate threats from imposters. Pre-visit screening questions can be added to the process as well as fully integrated temperature and mask screening at the point of entry.

Design, Build, & Support

Vision's full-scope Screening, Protection and Tracing (SPT) solution set encompasses design, build, and post-implementation support. Our Integrated Technology Delivery (ITD®) methodology will help you achieve your SPT goals by blending the latest technology, sophisticated design and our talented team of certified professionals. Post-implementation, choose from our comprehensive menu of maintenance and support offerings through our Managed Services Center (MSC).

- ▶ Touchless Access Control
- ▶ Elevated Skin Temperature Detection
- ▶ Mask Detection
- ▶ Contact Tracing
- ▶ Self-Deployable Systems to Fully Integrated Solutions
- ▶ Density & Social Distancing Policy Enforcement
- ▶ Access Control System Integration
- ▶ Video Management System Integration
- ▶ Visitor Management System Integration
- ▶ NDAA & TAA Compliant Solutions Available

Visitor Management Systems: The New Normal

Touchless Access Control

Our embedded face & palm recognition sensor solutions provide 100% hands-free hygienic user authentication for various applications including Access Control, Time & Attendance, Visitor Management, Event Management & more.

Elevated Skin Temperature & Mask Detection

Several states and local municipalities have implemented orders or issued guidance urging or requiring that temperature checks be implemented before employees are permitted to report to work. In addition to providing touchless face and palm user authentication, our SPT solution provides fast and accurate Elevated Skin Temperature (EST) measurement and detects if a protective mask is being worn. Users can be denied door access if an EST or no mask is detected. Identifying users having EST or not wearing a mask greatly helps prevent the spread of contagions.

Contact Tracing

Contact tracing can be a daunting and often manual process unless you have the right solution in place to facilitate these efforts. Vision's solution set can help your organization to trace potentially contaminated individuals using integrated access control reporting and analysis tools, video surveillance, wireless infrastructure and IoT sensor technology.

Vision can provide access control solutions that help organizations find all people who went through a door in close proximity to someone thought to be contagious. Organizations can quickly perform a forensic analysis to correlate access events by time window to identify people who are at increased risk of being in contact with contaminants or contagious individuals. This will allow enterprises to proactively advise individuals of their potential contamination and take the necessary hygienic precautions, as outlined by health and safety procedures and regulations.

In addition, Vision can provide the latest RTLS solutions that integrate with employee directories and visitor management systems to enable in-building wireless contact tracing.

Vision can help you to leverage the latest IoT technologies as well through occupancy sensor arrays designed to minimize contact by helping to enforce density and social distancing policies.

SPT Solutions

Protecting employees, visitors, and the broader community

Integrated Technology Delivery

Enhance your project's ROI while delivering it faster!

Managed Services Center

Choose from our flexible suite of 24/7 support, maintenance & monitoring services.
