Closet Cleanup

Working with Vision Technologies' certified installation teams, your telecommunications and data racks can be neat, labeled, documented and ready to support your end-user community.
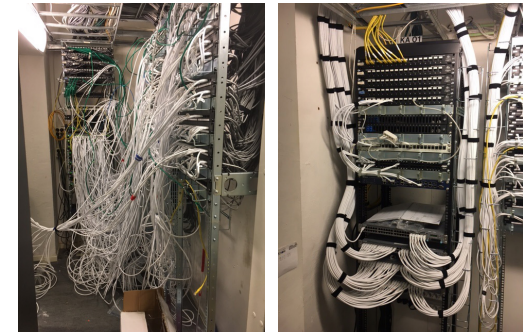

Our BICSI-certified RCDD's and world-class craftsman will coordinate the cleanup of your server room, telecommunications rooms and intermediate closets. We'll develop a plan to keep down-time to a minimum, working nights or weekends if that's what you need. Our commitment to 100% customer satisfaction is your assurance that the job will be done right—the first time.

Call Vision to schedule a review of your cable plant. One of our engineers will be happy to meet with you and your team to discuss your requirements.

Our team will perform a free site survey to determine the level of effort required to put your closets back to the way they should be. We'll consider your budget, when does the work need to be performed, what may need to be re-configured and what additional parts may be required. We'll provide a firm quotation, taking all of the factors into consideration.
