

Data Center In-Building Wireless Services

Reliable, Agnostic, Scalable, Proven

Vision Technologies' provides integrated networking and mobile technology solutions focused on the customer experience. The Mobility team was built with Neutral Host Cellular DAS, Public Safety DAS (often referred to as ERRCS or ARCS), Radio over IP (RoIP), Land Mobile Radio, and Wi-Fi in mind. Our dedicated wireless professionals understand the challenges and demands that data center customers face in this BYOD 24x7 environment.

Have You Experienced ...

- ▶ Inconsistent cellular quality?
- ▶ Poor LMR (two-way) connections?
- ▶ Carrier coordination/delivery issues?
- ▶ Costly change orders?
- ▶ Poor coordination between trades?
- ▶ Disconnect between Engineering/Integration?

Recognizing the need for segregation of certain aspects of wireless communications is an important factor in ensuring the enhanced security required in data centers. Recent technologies such as CBRS, 5G, and advances in radio communication using RoIP are key factors in Vision's complete and comprehensive offering.

Vision utilizes standard and compliant applications that focus on the security and integrity of Cellular, CBRS, RoIP, and Public Safety technologies. Our in-house team of professionals provide a complete array of services. Experienced Solutions Architects provide carrier and authority having jurisdiction (AHJ) approved designs. Vision's comprehensive approach enables technicians and engineers to install, commission, test, and provide post-installation support to comply with stringent data center operating guidelines.

Data Center In-Building Wireless Services

Reliability and Flexibility in Secure Environments

Reliable: We provide a 100% customer experience guarantee with our lifetime craftsmanship warranty across the full spectrum of solutions. Every In-Building Wireless system is designed utilizing the latest industry standard iBwave software by certified in-house professionals.

Carrier and OEM Agnostic: Vision has extensive experience with all of the carriers across every major wireless OEM. These relationships ensure that, regardless of the system, Vision can design, install, and integrate the system, successfully getting the carriers to approve and join the DAS.

Scalable: Scale is paramount in the data center market and our ability to compress schedules, deliver more than is expected helps the end user realize their ROI sooner rather than later. Our modular and flexible designs create a system that is easily expandable as the data center footprint increases. Our experience with overlaying other technologies such as CBRS, RoIP, and Public Safety limits the number of systems and integrators responsible for the successful implementation of all of your systems.

Proven: Vision has successfully implemented technology solutions in hundreds of facilities for all facets of In-Building Cellular DAS, Public Safety DAS, and integrated LMR systems. Our knowledge in the data center space, coupled with our Integrated Technology Delivery (ITD®) methodology, helps ensure that the installation and integration with the Carriers is accomplished with expertise and proficiency. Our integration crews that are currently installing fiber infrastructure, conveyance, and other systems, are the same teams conducting the physical installation of the DAS infrastructure. These skilled individuals work closely with Vision's in-house iBwave Design Engineers, Solutions Architects, and Engineering resources for successful, seamless implementations. Vision's agnostic and unbiased approach using our broad portfolio of manufacturers ensures that our customers receive the best possible solution.

The Data Center Experience

Data center wireless solutions built for the customer experience.

Integrated Technology Delivery

Enhance your project's ROI while delivering it faster!

Managed Services Center

Choose from our flexible suite of 24/7 support, maintenance & monitoring services.
