

Security Solutions for Building Owners & Managers

Powerful Security Protection

When it comes to protecting what you value most – the safety of your buildings, tenants, and the people who depend on you – count on Vision Technologies' security systems.

Be it a small retail establishment or a large, industrial or institutional facility, we know that each facility is unique, as is each security concern. That's why we custom-design systems for commercial properties with the flexibility to meet your exact needs. We'll eliminate the need for different systems for different applications. Choose from intrusion detection, access control, lobby management, video surveillance, real time location services, scanning, protection and tracing, plus more, in one flexible, upgradeable system.

In addition, our Integrated Technology Delivery (ITD®) methodology will help you achieve your security goals by blending outstanding products, sophisticated design and our talented team of people.

We'll also help you access your facilities utilizing our Risk Management Consulting methodology to determine your optimal level of security. The result will be a full scope security solution within budget and one that provides a road map for growth and expansion.

Security Solutions

Expertise You Can Rely On

From inception, Vision's certified security professionals work with clients to define a best fit, best value solution based on industry practices, and provide exceptional customer service. Our goal is to improve the interoperability between physical security systems while implementing frameworks that fit specific business requirements. Vision is the perfect partner to design and implement industry-compliant security solutions with a 100% Satisfaction Guarantee.

Sampling of Past Performance Projects

Howard Hughes Realty

Since 2017, Vision has provided comprehensive project management and design-build security systems services for a commercial office complex. The work covers a campus environment, including outside-and inside-plant work and multiple buildings. Vision's assigned project manager receives requests from the customer contact and then initiates the process of requirements gathering, design, installation, commissioning, and ongoing support, all while consulting with the customer contact for review and approval at key progress milestones.

County of Northampton, Pennsylvania

Vision is implementing one of its SPT solutions and facilitating occupant re-entry for Northampton County. By installing 18 temperature and mask detection readers with various mounting options, Vision is assisting the county in creating a safer, more secure environment for its employees, contractors, and guests. Vision also provides Northampton with outsourced IT services and support for their emerging technology needs. Our 25-person team serves as the Information Services Division within the County's Department of Fiscal Affairs.

U.S. Army Research Laboratory

Since 2014, Vision Technologies has provided a variety of security design, engineering, installation and support services for the U.S. Army's Adelphi Research Center, a 36-building military research complex with over 1.1 million square feet of research and laboratory space. Projects included RFID and access control with badge tracing. Electronic tags and badges were attached to selected assets and worn by staff members. These tags broadcast a data packet, in a beacon fashion, at specified intervals or immediately upon a tag's button-push.
